

TESTING

The Testing specialty has more than 15 years of experience performing testing services and participating as an independent entity to the development processes; a commitment that allows us to be more objective in the testing processes, in order to ensure the software quality. Our testing strategy is based on the identification of risks, depending on the severity with which the defects are identified. We use levels and types of tests that are based on the best practices of the ISTQB® framework.

Testing processes are guaranteed under the certification of the CMMI® DEV model. We are suppliers authorized by the ISTQB® to train test engineers for certification before this organization.

In the Testing Management Office, we focus on improving processes, researching new technological trends and methodologies for the innovation of our services to be at the forefront of the market.

TESTING

IMPROVE QUALITY AND AVOID UNNECESSARY EXPENSES

It has been proven that companies that take more time to implement a testing process or correct defects in a development project must carry an additional 50% to 100% of the total cost of the project, compared to initial budget.

A reality that many organizations must face when they spend money excessively on the corrections of their systems, by not performing tests at the early stages of their projects, besides affecting their investments, reputation in the industry, and delivery times with the customer.

TESTING, THE STRATEGIC PIECE TO OPTIMIZE YOUR PROJECTS

Through the specialty of Testing, we satisfy the needs of our external and internal clients, ensuring the quality of software products with our processes, methodologies, tools and qualified personnel, in the field of software testing.

We design cases and matrices from early stages and in a systematic way, with a concrete testing process, artifacts, administration tools, automation, load and performance tests, a work that ensures, in advance, the identification of defects to be corrected.

Our team of consultants has the experience, skills and corresponding knowledge, providing you with the guarantee of a professional service with the best practices of the business sector.

FEATURES

Test levels

Component.
Comprehensive.
System.
Acceptance Tests.

Test Types

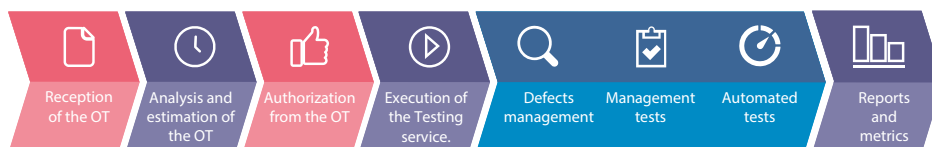

Functional.
Non-functional.
Structural.
Test Automation.

Data quality.
ETL quality.
User experience.

Modalities

Preventive QA in processes and development standards.
Consulting and improvement of testing processes.
Test injection.
Training in tests.
Solution Center of tests.
Specialized consulting.
Courses for certification in ISTQB®.
Security tests.
Big Data QA.

The Testing specialty has a factory model to serve the Testing services in different platforms, adapting to any project management methodology.

Such model is represented in the following diagram:

BENEFITS

Reduction of risks in project delivery.

Prevention of defects at the early stages of the development of the application, product or service.

Objectivity tests, focusing our efforts on detecting defects.

Significant decrease in project costs.

Increase in the quality of the application, product or service, as well as the customer satisfaction.

100% trained and specialized consultants for each business need.

We are a Silver Partner supplier, certified by the ISTQB®.
